Subject Index

Bus impedance matrix
three-phase, development of, in complex frequency domain for transient analysis in unbalanced distribution systems, 183
Bus load processing
real time, 237

Cables
400 kV, thermal assessment of surface troughs for, with air, backfill and water fillings, 53
Current rating
dynamic, of overhead lines, 11
Current sensor
for measurement and instrumentation in primary distribution feeders, field measurement characterization of, 101

Data
acquisition, measurement and control using microcomputer and multiprocessor systems, suggested methodology for, 113
Data base management system
and its application in voltage and reactive power control expert system, 147
Decentralized voltage control
rule based approach to construction of local network model for, 119
Demand-side management
time-differentiated system load impacts of: case study, 165

EHV transmission system
planning in U.S.A., 17
Environmental aspects
of route selection for overhead lines in U.S.A., 217
Expert decision support system
for assisting power system operators to correct real power flow violations, 47
Expert system
for voltage and reactive power control, data base management system and its application in, 147

Field measurement based characterization
of current sensor for measurement and instrumentation in primary distribution feeders, 101
Fuzzy pattern recognition approach
to power system transient stability, 141

Hydrothermal electric power systems
minimum loss power flow in, 195

Impedance matrix
three-phase bus, in complex frequency domain, development of, for transient analysis in unbalanced distribution systems, 183
Induction motor
parameter estimation of, using spreadsheet program on personal computer, 157
Induction-motor starting
dynamic simulation of, using microcomputer, 227

Lightning
tropical, and its interaction with power systems, statistics on, 63
Load control alternatives
multiobjective optimization method for electrical power distribution systems with, 1
Load flow
numerical solution methods, fast linear method and convergence improvement of, 23
Load forecasting
for substations in distribution system, 79
Load impacts
time-differentiated system, of demand-side management: case study, 165
Load modelling
z-plane, with particular reference to subharmonic mode responses, 33
Load processing
real time bus, 237
Local network model
for decentralized voltage control, rule based approach to construction of, 119

Microcomputer and multiprocessor systems
suggested methodology for data acquisition, measurement and control using, 113

Network model
local, for decentralized voltage control, rule based approach to construction of, 119

Optimal power dispatch
real and reactive, elegant approach to, 173
Optimal reactive power dispatch
security constrained, 209
Optimization method
multiobjective, for electrical power distribution systems with load control alternatives, 1
Overhead lines
dynamic current rating of, 11
in U.S.A., environmental aspects of route selection for, 217

Parameter estimation
of induction motors using spreadsheet program on personal computer, 157
Power flow
minimum loss, in hydrothermal electric power systems, 195

Reactive power and voltage control
data base management system and its application in expert system for, 147

© Elsevier Sequoia/Printed in The Netherlands

Reactive power dispatch
security constrained optimal, 209
Real power flow violations
expert decision support system for assisting power system operators to correct, 47
Real and reactive power dispatch
optimal, elegant approach to, 173
Route selection
for overhead lines in U.S.A., environmental aspects of, 217

Spreadsheet program
parameter estimation of induction motors using, on personal computer, 157
Static VAR compensators
in long distance AC transmission systems, co-ordinated compensation strategy involving synchronous generators and, 89
Subharmonic mode responses
z-plane load modelling with particular reference to, 33
Substations
in distribution system, load forecasting for, 79
Synchronous generators
and static VAR compensators in long distance AC transmission systems, co-ordinated compensation strategy involving, 89

Thermal assessment
of surface troughs for 400 kV cables with air, backfill and water fillings, 53
Transient analysis
in unbalanced distribution systems, development of three-phase bus impedance matrix in complex frequency domain for, 183
Transient stability
of power system, fuzzy pattern recognition approach to, 141

Unbalanced distribution systems
development of three-phase bus impedance matrix in complex frequency domain for transient analysis in, 183
VAR compensators
static, in long distance AC transmission systems, co-ordinated compensation strategy involving synchronous generators and, 89
Voltage control
decentralized, rule based approach to construction of local network model for, 119
Voltage ranking methods
comparison of, 127
Voltage and reactive power control
data base management system and its application in expert system for, 147
